**GROWTH CONTINUES FOR THE NATION’S LARGEST PRIVATE  
RADIOLOGY PRACTICE**

*Effective March 31<sup>st</sup>; Radiology Associates of North Texas will now employ 164 radiologists.*

Fort Worth, TX – April 4<sup>th</sup>, 2015 – Radiology Associates of North Texas, P.A.

(Radiology Associates) announced today that effective March 31<sup>st</sup>, 2016, Texas Neuroradiology, P.A. (TNR) and Radiological Consultants Association, P.A. (RCA) have finalized agreements to join Radiology Associates. These are the 4<sup>th</sup> and 5<sup>th</sup> radiology practices to join Radiology Associates within the last 6 years.

With the addition of 5 physicians from TNR and 28 from RCA, the expanded group will employ a total of 164 board certified radiologists and 67 medical and administration staff. Headquartered in Fort Worth, TX, Radiology Associates will now provide professional radiology services to 31 DFW hospitals, 26 DFW imaging centers and over 80 other imaging locations throughout Texas. In all, the combined group will read over 2.5 million exams each year.

“Radiology Associates is delighted to welcome TNR and RCA to our organization,” said RA President Dr. David Phelps. “The combination of our practices will create an even greater depth of expertise and experience, enabling us to continue to raise the level of service we provide our patients and healthcare facilities across the DFW Metroplex and throughout the state of Texas.”

For the last four consecutive years, Radiology Associates has been named the largest private radiology practice in the U.S., based on an annual survey of U.S. radiology practices published in the Radiology Business Journal.

"Our cultures and long term goals are synergistic, making this combination of practices a natural progression," said RCA President Dr. David Leifer. "RCA knows the management expertise and experience, along with the other advantages of being part of the nation's leading radiologist run group, will propel our combined practices much further ahead than would be possible apart."
